

Instructions

Set up selenium webdriver

Step 1:- Install selenium package using following command
pip install selenium

Step 2:- Check whether the package has been installed
type the command ***python*** in terminal
and type ***from selenium import webdriver***
then python will run if the package has been installed.

Step 3:- To open and work in web browser automatically we need to install the executable web driver.
if you are using Chrome [click here](#).
if you are using different browser check out in this [link](#).

Step 4:- Download the code from the [link](#) or https://github.com/vigneshDurai14/python_projects.git

Step 5:- To set the path for executing the program.
For example, ***webdriver.Chrome(executable_path="C:\\Program File(x86)\\Google\\Chrome\\chromedriver.exe")***
in the script.

Step 6:- after the setting path, run the python in terminal.
